**PCI Embedded announces availability of VME products
Jackson, California, September 17, 2008**

PCI Embedded Computer Systems, Inc. announces today that we have added distribution of “Hartmann Elektronik” and “Wiener, Plien & Baus Elektronik” VME products.

“Wiener, Plien, and Baus Elektronik” has recently become part of the “Phoenix Mecano Company” and has joined forces with “Hartmann Elektronik” to provide a complete line of VME card racks. Hartmann specializes in high quality industrial VME and VME64X systems and backplanes, while Wiener is a major supplier of high power, rugged environment, nuclear qualified VME, VME64X, VME430, VXI, VXS, CAMAC, and NIM systems and backplanes primarily to nuclear physics labs and military test markets. A complete VME product line is now available for industrial, lab, homeland security, medical and military test markets.

PCI Embedded continues to distribute a complete line of Hartmann Elektronik GmbH CompactPCI systems, remote controllers, backplanes, and accessories and Congatec AG COM Express, XTX, and ETX embedded computer modules and development tools. We also support the embedded market with our own mini-XTX, mini-COM, and micro-COM carriers and embedded computer systems.
