

PCI Embedded announces mini-COM II Carrier
Jackson, California, October 2009

PCI Embedded Computer Systems, Inc. announces a new improved small form factor COM Express carrier.

SMALLEST FULL FEATURE COM EXPRESS CARRIER AVAILABLE ON THE MARKET

The **mini-COM II Carrier** is the same size as a basic size COM Express module (**95 x 125mm**). It adds 2 more USB sockets and mini-PCI Express slot to the original mini-COM Carrier. **It can easily be used for development and implemented as-is in your end product** without having to design a full custom carrier, by adding SATA + USB expansion, mini-PCI Type III, PCI Express mini, Express/34, PCI/104-Express, and prototyping add-on adapters with standard available I/O cards.

The **micro-COM pr mini-COM Carrier** combined with available COM Express Modules and mini-I/O cards provides a means to quickly implement an embedded computer design with:

- Small form factor carrier that is the same size as a COM Express Computer-On-Module
- Expandable by adding adapters and standard I/O cards
- Modular embedded computer solution without a backplane
- Vendor BIOS transparent - Any vendors standard Com Express, ETXexpress®, or microETXexpress can be adapted.
- No need to design a full custom carrier for most applications
- Can be easily modified with custom add-on cards for applications that require custom circuitry to be added
- **Custom design and manufacturing services are also available**

A typical application will fit in a space (W) 95 x (L) 125 x (H) 38 mm.

Cooling is easily accomplished with standard heatsink (passive or active) or by attaching the COM Express module directly to a chassis wall with a heatspreader assembly.

Complete systems with Congatec COM Express modules installed also available.
